

# CVin.Bio

Talent infrastructure for the AI agent economy. Candidates get structured profiles. Employers get agent-queryable search. AI hiring agents get an MCP endpoint.

cvin.bio · Vedang Vatsa, Founder

PROBLEM & MARKET

## The AI agent economy needs hiring infrastructure. None exists.

By 2027, 40% of enterprise apps will embed AI agents (Gartner). AI engineer postings grew 143% YoY. Agent orchestration, RAG pipelines, and autonomous workflows are the fastest-growing job categories.

But hiring still runs on keyword matching and recruiter fees. A single senior hire costs \$50K+ in fees and takes 89 days. No platform structures talent data so that agents on either side, whether for job seekers or employers, can query it programmatically.

AI sourcing startups raised \$900M+ but all automate the recruiter. None build the structured data layer agents need.

SOLUTION

Structured talent infrastructure for both sides of hiring

Job seekers get machine-readable profiles that AI systems can discover. Employers get structured search that replaces LinkedIn Recruiter. AI hiring agents on both sides get MCP endpoints.

**CV Parser**  
Upload a CV, get a shareable profile at cvin.bio/name. Every shared link carries the brand, turning candidates into organic distribution. Built-in viral loop.

**Job Aggregation**  
68K+ live listings from 2K+ companies via Greenhouse, Ashby, Lever, Workable APIs.

**MCP Server**  
Live Model Context Protocol endpoint. AI agents search, filter, retrieve candidates programmatically.

**Agent Module**  
Embeddable SDK. Companies' and candidates' AI agents interact via structured talent protocol.

**JOB BOARDS**  
LinkedIn, Indeed, ZipRecruiter  
Keywords. No structured data. No agent endpoints. Not built for AI-mediated hiring.

**AI SOURCING TOOLS**  
Juicebox, Eightfold, SeekOut  
Automate the recruiter's workflow. Dashboard for humans. Candidates are passive data.

**CVIN.BIO**  
**Talent protocol for the agent economy**  
Both job seekers' and employers' AI agents interact via structured MCP endpoints. The data layer the entire ecosystem will read from.

BUSINESS MODEL

Four revenue streams

- 01

**Featured placements**  
Companies pay to boost roles to skill-matched candidates.
- 02

**Sourcing subscriptions**  
Per-seat pricing via MCP or web. Replaces LinkedIn Recruiter (\$8,999/yr).
- 03

**Placement success fees**  
Performance-based. Fraction of the 20-30% recruiters charge.
- 04

**Agent Hiring Module**  
SaaS. Per-query pricing for AI agents on both sides.
- 05

**AI Talent Finding Engine**  
Replaces traditional ATS. Companies deploy an AI agent that sources, screens, and ranks candidates autonomously from our structured database.

|                       |          |
|-----------------------|----------|
| Recruiter agency      | \$50,000 |
| LinkedIn Recruiter/yr | \$8,999  |
| CVin.Bio sourcing/yr  | \$1,200  |

TRACTION

Launched April 2026

**68K+**  
Live job listings

**2K+**  
Companies tracked

**100+**  
AI agents w/ access

**3**  
Research reports (gated)

**120K+**  
Previous community built

**80M**  
LinkedIn views/yr

Sources: OpenAI, Anthropic, Stripe, Airbnb, Coinbase, Cloudflare, Databricks, Snowflake + 2,000 others. MCP server live and operational. Entire platform self-built. Self-funded. No external investment to date.

## WHY NOW

# The AI agent economy is creating a new hiring paradigm

### 🔧 Agent frameworks ship

LangChain, CrewAI, AutoGen hit enterprise. Hiring for agent roles requires new infra.

### 🤖 AI reads resumes first

ATS bots filter before humans see. Non-structured profiles get dropped.

### 🔗 MCP enables new category

Anthropic's protocol standardized how AI queries tools. We expose talent search via MCP.

### 💰 Recruiters are fragile

20-30% salary fees + LinkedIn boolean. Structured discovery costs a fraction.

### Now

- Job aggregation pipeline
- Structured profiles from CVs
- MCP server live
- Content distribution

### Next

- Agent Hiring Module
- Employer dashboard
- Verified skill assessments
- Agent-to-agent matching

### Long-term

- Open talent protocol
- Candidate agents respond to employer agents
- Identity layer for AI hiring

## FOUNDER

## Vedang Vatsa

IIT Kanpur alumnus · FRSA · 25 publications

### Track Record in Jobs & Hiring

- **HashtagWeb3.com**: Built one of the largest Web3 job boards. 120K members, 55M post views. Microsoft for Startups.
- **Prosple**: Country Head, Australia's largest early-career job platform. 200K users.
- **KPMG**: Program Manager, Ministry of IT, India.
- **Studio Tesseract**: Co-founded. 30-person team, 27 products, 5 continents.
- **Network School (by Balaji Srinivasan)**: Software Engineer.
- 80M yearly LinkedIn post views on original research.

### Credentials

- IIT Kanpur alumnus, MBA
- Fellow of the Royal Society of Arts
- 25 peer-reviewed publications (IEEE, SSRN)
- Invited to Parliament of India
- Japan's special visa for intellectual figures
- Favikon Top 50 Fintech Creators
- Thinkers360 Top 50 Metaverse Thought Leaders

## Let's talk.

### Engineering

Agent Hiring Module SDK. Employer dashboard. Scale to 200K+ listings.

### Go-to-market

GTM co-founder. Direct outreach to AI-native companies.

### Operations

Infrastructure at scale. Legal framework for data governance.

The platform is live. This is not a prototype. It is a working product ready to scale.
